

Education

Harvard University

A.B. Computer Science

3.7 GPA

Relevant Coursework: Intro to Algorithms and their Limitations (CS1200), Intro to CS (CS50), Linear Algebra (AM22a), Stat 110 (Probability), Math 101 (Discrete Math),

Cambridge, MA

May 2028

Projects

Harvard Meal Tracker – github.com/andrewleblanc1/harvardMealTracker, Live website: harvardmealtracker.vercel.app

- Utilized CS 50 Dining API to create Harvard's first Macronutrient and calorie calculator/tracker for the 12 Undergraduate Dining Halls as well as Annenberg and Fly-by serving 7,000 students
- Built with a Next.js + Python framework with the use of FastAPI. This framework achieved average speeds of sub 50 MS on the front-end and sub 1000 MS on the backend when calling the CS 50 Dining API
- Designed the website to operate cost-free and with low maintenance by using the CS 50 Dining API and deploying via Vercel. The API negated the need for a database or manual updates and Vercel provides free hosting.

AI Daily Digest – github.com/andrewleblanc1/ai-daily-digest

- Built an automated Python pipeline that aggregates AI newsletter (via RSS) and recent posts from 10 X accounts (via a third-party data API), then uses the Anthropic API (Claude) to generate a single cohesive daily digest delivered by email
- Engineered a resilient fetch layer with per-source error isolation, so a single failed feed or account is skipped rather than breaking the full run, plus 24-hour time-window filtering and HTML-to-text cleanup.
- Designed for low-cost scheduled operation (~\$2/month) via GitHub Actions cron, with all credentials managed as environment variables and repository secrets.

Blackjack Web Emulator – github.com/andrewleblanc1/blackjack

- Built a full-stack web version of Blackjack using Python, Flask, Jinja2, HTML/CSS, and SQLite, with user authentication, persistent accounts, and a wager-based economy.
- Designed an object-oriented game engine handling deck shuffling, hand evaluation, and rules-based dealer AI, including correct ace valuation (1 or 11) and dealer hit-until-17 logic.
- Implemented SQLite-backed persistence for user credentials, balances, and game history, surfacing each user's recent results and outcomes on their dashboard.

Activities

Harvard Texas Club

Events/Partnership director

Cambridge, MA

September 2025- Present

- Coordinated and executed events in collaboration with other Harvard student organizations, managing logistics, promotion, and outreach
- Built professional partnerships with major employers, consulting and STEM organizations, and elected officials to expand the Harvard Texas Club's network and helping keep talent in Texas

Latinos in Finance and Technology

Member

Cambridge, MA

September 2024 – Present

- Participate in technical workshops to strengthen coding and technical skills (LeetCode, case studies)
- Engage with Latinx leaders across finance, technology, and entrepreneurship through mentorship panels and networking, building industry insight
